?? Reinforce WiFi Reach: Increases your existing WiFi range and extends your wireless network for hard-to-reach areas?? Fast and Reliable: Operates over both the 2.4GH z (300Mbps) and 5GHz (867Mbps) for more stable wireless experience. Adaptive Path selection technology keeps your network running at Top-speed?? Universal Compatibility: Works with any WiFi router or wireless access point?? Easy Deployment: Smart signal lights show the strength of the signal received from the existing router, which can help to find the best location for optimal WiFi coverage?? Wireless Security: Supports WPA, WPA2 wireless connection. Enable wireless security encryption and prevent unauthorized access, protect your important data Strong internet signals in one's home are always desirable. And, to have seamless internet connectivity extending to the length and breadth of your home, you can set up Galaway WiFi Extender. I installed Galaway WiFi Extender by following simple steps to improve the signal and strength of my home internet connection. Setting up Galaway WiFi Extender will facilitate seamless internet connectivity in your entire home which can be executed possibly in three different ways. Here is a quick guide that will throw light on how to set up or set up Galaway WiFi Extender from the perspective of all three different ways. Installing the Galaway WiFi Extender Using the WPS Button In order to connect your Galaway WiFi extender without a password or wire, you must simply adhere to the following step-by-step procedure. Step 1 - As the first step you must track down the WPS button on the rear side of your WiFi router. Step 2 - Long press the WPS button of your WiFi router for a couple of seconds. Step 3 - Now pick your Galaway WiFi Extender up and press the WPS button for almost 40 seconds and then wait for the next 30 seconds so that your Galaway WiFi Extender gets eventually paired up with your WiFi router. Step 4 - The Extender light will turn on after a few seconds after which you should check the SSID of your Galaway Extender being shown on your WiFi router. Step 5 – Finally connect your Galaway WiFi Extender using Service Set Identifier and check whether your internet is working. Set up your Galaway WiFi Extender with Your Personal Computer The other way to set up Galaway WiFi Extender and pair it with your WiFi router is by using the default SSID and password. Following the below-mentioned process to get this executed. Step 1 - Galaway signal booster can act as an access point by means of which you will actually get 1 Wireless Access Network and 1 Local Area Network port in the device. Step 2 - Now you can connect with the PC by connecting through the wire or using the default SSID name “Galaway” to connect via WiFi. Step 3 - Moving forward, simply open the home page of your internet browser and type http://192.168.10.1 or to log in for the Galaway WiFi Extender. Step 4 - Now in order to run the setup wizard, type “admin” as the default password. Step 5 - Now start the setup wizard to scan and find all the available WiFi networks. Step 6 - Then choose your specific WiFi and punch in the WiFi key. Step 7 - Click on the Next button and name the Galaway extender name in the subsequent steps. Step 8 – Accomplish the wizard by saving the settings and rebooting the extender. Set up your Galaway WiFi Extender by Pairing it with your Mobile’s WiFi There is yet another way of configuring your Galaway Extender using your mobile’s WiFi. Just follow the quick procedure enlisted hereunder to get this done. Step 1 - Open your phone’s WiFi settings and find relevant networks by a quick scan. Step 2 - While using your mobile, enter “Galaway” as the default name. Step 3 - Now launch the web browser from your phone, and access http://192.168.10.1 or page and click on OK subsequently. Step 4 - You will see the Galaway Login page, type “admin” as the password in the space prompted for the password. Step 5 - Now open the WiFi wizard and search for the available networks. Step 6 - Select the preferred WiFi networks and move forward to create Extender’s SSID. Step 7 - Click on Finish and check whether the internet connection has been set up Nowadays, almost every building where people live has a wireless network. In this era, it has become important to have a WIFI signal everywhere and now no one can even imagine their life without the internet. Further, in the modern era, people’s lives revolve around gadgets that need to connect to the internet. From streaming our favorite movie, education, work, booking flight now we can do everything online and for that, we need a good connection of internet. Furthermore, we need a wireless network at every place where we are. It is no longer enough to have a wireless signal at a specific place at our home or workplace. So, we use WIFI EXTENDER to extend the signal as it is the best way to spread the network at every corner of your home or workplace. And, GALAWAY WIFI EXTENDER is the best version of the extender as it helps to extend and distribute the wireless network signal to any area where the router signal is not able to reach. Also, it has become very common to have a WIFI EXTENDER at home as it is affordable. Moreover, sometimes the problem that happens with a wireless WIFI network is because of the outdated router. Even if you buy the new extender but still you face problems with your network because you have an old router. So, just make sure before setting up the WIFI range extender that your router is working properly or not. HOW DO I CONNECT MY GALAWAY WIFI EXTENDER? GALAWAY WIFI EXTENDER setup is not always a straightforward problem. But, after reading this article, you will find a very easy way to setup this even if you have no networking background. PLACEMENT OF THE WIFI EXTENDER IS CRITICAL First and foremost, the very important thing is to talk about is placement. This is important as it allows you to enhance the performance of your network and broadcast the WIFI SIGNAL in a large area. This is the placement of both the router and the GALAWAY WIFI EXTENDER. As, it depending on the number of rooms in your house and office, you maybe have to be a little bit creative in finding the best spot. However, priority should always be given to the most important areas where you are more likely to require the wireless signal. Placement for the GALAWAY EIFI EXTENDER is everything. You have to place it in the right places the wrong placement will not solve your WIFI network dead spots. If the wireless signal will still be problematic. WIFI RANGE EXTENDER uses the same radio waves as the ROUTERS and many other electronic devices. Further, the whole thought behind the WIFI RANGE EXTENDER is that it should receive a solid wireless signal from the ROUTER, then rebroadcast it to areas where the network signal is not able to reach due to distance or barriers. MAPING OUT ALL THE DEAD ZONES If you want to check out the areas of your home or office where the network range is proper or not. For that, you have to move around your home with your phone to check the signal. And, after that, you should ask yourself a simple question. Is my router placed in the best location? Some guides advise you to place the router at the center of your home or office, but this is not the best way always. As the router should be positioned where it best helps the most people using it. The zones where people least need WIFI SIGNAL can then be served by the use of the GALAWAY WIFI RANGE EXTENDER. Once finding placement for the wifi EXTENDER, you must keep in mind that it requires an electric outlet. For that, the best way is to find a wall electrical outlet that is between the ROUTER and the WIFI SIGNAL. If this is not possible, you can use a power extension socket. One issue is with WIFI and ROUTERS is people who live in multistorey apartments. The router is situated on one floor, and the other floor may experience several wifi signal blind spots. A WIFI extender solves this issue but it requires some inventiveness to place it at the right spot where it can optimally broadcast the WIFI signal. The materials of the building can significantly weaken WIFI signals, specifically over distance. Consequently, the WIFI extender should be placed directly above the WIFI router so that it can obtain a strong WIFI signal and distribute it on the floor it is serving. Additional, important GALAWAY EXTENDER placement you have to consider is items that disrupt the WIFI signals. Unbeknown to many people, some items in the house or at the office can significantly disrupt WIFI signals like large metal objects are always a big culprit, large mirrors, electrical devices such as refrigerators, ovens, and baby monitors always interfere with the Wi-Fi signal. When optimizing the location of your ROUTER and your EXTENDER, you should always take care of these troubles and avoid them if you can. Decluttering off needless items is highly advisable, particularly those that are huge in nature. But, WIFI signals can pass through walls, do not ruin the architectural integrity of your home in the name of clearing a pathway for the WIFI signals. One reason why officerequireWi-Fi extenders are to get to networked devices such as printers. Some big printers are located at the utmost end of the corridor or in a separate room. They may not receive satisfactory Wi-Fi signals and so it requires the boost of an extender. In case, the EXTENDER should be placed in the clearest line of sight among the ROUTER and the printer or any other device. The good thing with the GALAWAY WIFI EXTENDER is that they do not use a cable to connect to the power outlet. They are cordless, which means they connect directly to the power outlet socket. This helps to hold it in place without unnecessary movement and has a neat appearance. They are also small, thus unremarkable. EASY STEPS TO PERFORM GALAWAY WIFI EXTENDER SETUP Follow these given steps to perform Galaway Wifi Extender setup: SETUP THROUGH WPS BUTTON This will chiefly depend on if your ROUTER has a WPS button. WPS means WIFI-protected set up. Nowadays, most modern routers have this function. It is a button that is labeled with arrows and looks like a yin and yang sign. It allows the procedure to be quicker and more direct compared with the other options. Initially, you need to use the WPS button on both the router and the extender. Then, the solid green light will appear on the extender which indicates that it has established a connection with the router. ETHERNET CABLE SETUP GALAWAY WIFI EXTENDER involves the use of an Ethernet cable.Connect the Ethernet cable to the extender and the other end to a laptop or computer that is associated to the same network as the router.Then, open a browser window and type the IP address 192.168.10.1 of the extender device you are setting up. The IP will be available in the instruction manual that came with the device.After that, enter the login details as provided ad follow the instructions to set up the network name and security. When the distances between the router and the WIFI dead spot are great. And, you want Wi-Fi in your garden, you should consider continuing using the Ethernet cable after set up. The cable connects the router and the extender so that the extender can be broadcast the WIFI signals in the new location. WIRELESS SETUP This is the step that most people prefer for that follow these steps: Firstly, unbox your device and plug it. Make sure you do it next to your router in the same room.Then, press the power button on and give the time to the extendertill the green power Led light is on and solid green. Do not proceed if it is still blinking.After that, go to your laptop, phone or computer and turn on Wi-Fi. In the Wi-Fi list, you will find the name of your new GALAWAY EXTENDED R so Connect to this Wi-Fi.Now, open a browser window in your phone or laptop and type the IP address provided in the instruction manual.A login page will open now then login with credentials mentioned in the manual. For GALAWAY devices, it will be admin as for both the username and password. Please confirm this from the instruction manual.Now, you have been logged in, click on the repeater wizard which will help you to complete the process.You will choose your router’s name and input password then click apply.your extender will lose the default Wi-Fi and log you out. It will adopt the new Wi-Fi settings from the router.Finally, your extender is set and ready to go.
